
Non Code Access (Switchless) Calling

Non Code Access (NCA) lets service providers offer their end-users preferred calling without the requirement to invest in a network or switching.

NCA Calling

Non Code Access allows service providers to participate in the calling market without investing in network infrastructure. End-users are provided with a seamless call service and are billed by their service provider.

Telecom Wholesale routes calls through the Intelligent Network (IN). The IN acts as a virtual switch for the service provider.

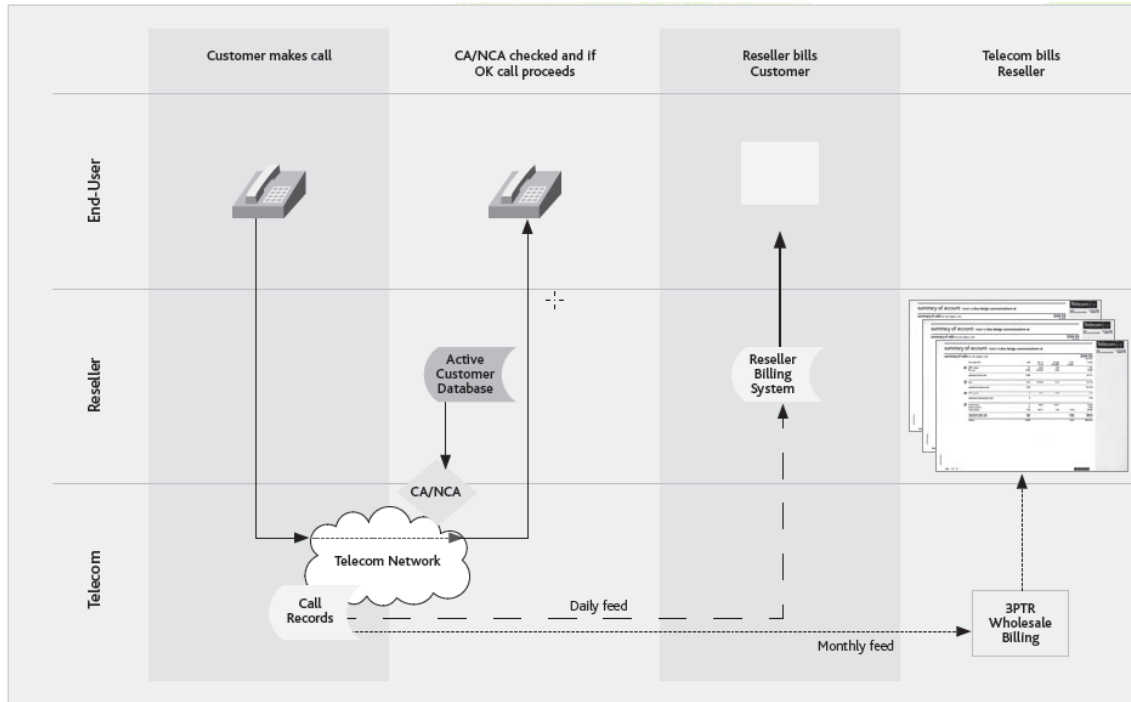

Service providers are required to set call rates; provide a billing system capable of accepting standard call detail records, and rating and billing national and international calls. They control branding and pricing.

Benefits

The benefits of Non Code Access for Service Providers include:

- **Provide full voice services** without investment in infrastructure/networks
- **Ability to deliver** national, mobile and international calls
- **Market toll services** under own brand
- **Focus customer services** rather than operational issues
- **Set pricing**
- **Potential to bundle products**

NCA Calling

Availability

Non Code Access is not available in all exchanges.

The Switchless Calling technology is incompatible with the following exchanges:

- Analogue exchange types (XBAR or UAX)
- NEAX 61E-VS switches or Remote Line Units (RLUs) hosted off them
- The following services are incompatible with Switchless Calling:
 - Call Readdress – cannot be programmed on Readdressed lines
 - Call Track – not authorised for Call Track lines
 - Dual Number – cannot be programmed on Dual Numbers
 - Fax
 - FaxAbility – cannot be programmed on FaxAbility numbers
 - Party lines – not authorised for Party Lines

Requirements

The service provider must have a billing system capable of accepting standard call detail records, and rating and billing national and international calls.
