Business Line Rental

Standard Business Lines over the PSTN are a mature well established product which is designed for all business customers – from small one site end users to large corporates. All need to have a reliable connection.

Benefits

Provides the basic service for service providers to package with other products such as SmartPhone services and Internet access.

How it works

The customer pays a monthly rental charge for a standard business line as well as any call usage. This call usage includes Business Local Call charging which is charged at peak /off peak or whole of day rates. (Currently Peak is 7.00am-10.00pm and Off Peak is 10.00pm - 7.00am).

There are two geographic pricing classifications for Business Access:

- Zone 1 is the area where there are competitive networks, and
- Zone 2 is all other areas in New Zealand.

Additionally, pricing is dependant upon the classification of the end-user – a SME or a corporate. New connections incur a connection fee and installation charges apply to work carried out at an end-user's site.

A Fault Location Fee is charged when a contractor goes to fix a fault and they find that the fault is not in the network (i.e. it is on end-user's premises and is not covered by a wiring maintenance contract), or no fault exists.

Availability

Nationally.
